1 GENERAL FEATURES

Lumières et Couleurs lighting fixtures are high-quality products, made primarily from noble and eco-responsible materials such as wood and glass. Their manufacturing is largely artisanal. Under normal use, they do not require special maintenance.

Each piece is unique and exclusive. Variations in shape and color may exist from one model to another, and we hope that the fixture you have chosen will give you complete satisfaction.

They come pre-equipped with standard LED bulbs, which are easy to find commercially if replacement is needed. The specifications of the bulbs provided with your fixture are included in the appendix of this manual.

Lumières et Couleurs lighting fixtures are guaranteed for 2 years, excluding consumables (bulbs) and improper use conditions (e.g., glass breakage due to severe impact).

Lumières et Couleurs is a small individual business based in La Rochelle, specializing in the creation of exceptional lighting fixtures. Our products are made to the highest standards, from initial design to final illumination. Every aspect, from material selection to manufacturing processes and color application for colored models, is handled with the utmost care to offer you a unique and exclusive fixture. Environmental impact is also a priority, fully integrated into our design and production philosophy.

Our creations are available online, by order, or at special events, trade shows, and showrooms. You can find all information in this manual, as well as details about our current and upcoming creations, on our website: <https://lumieresetcouleurs.fr>

2 WARNINGS AND PRECAUTIONS

- This fixture is made of glass: **risk of breakage and injury**.
- **Pre-equipped low-energy LED bulbs:** Do not use other types of bulbs. LED bulbs generate heat, enough to slightly warm the glass if the bulb is close to the surface (mildly warm to the touch). This heating is normal and remains limited, even during continuous operation.
- **Standardized information and logo description:**

This fixture is a Class II electrical appliance designed to operate on 220–230V, 50Hz AC mains supply. Before performing any maintenance, unplug the fixture from the electrical outlet.

This fixture is intended for indoor domestic use only. Operating and storage temperatures must be between 5°C and 40°C.

Do not dispose of this fixture in household waste. It contains components that may be harmful to the environment and health. Some components can be reused or recycled.

Please consult your local municipal regulations regarding electrical waste disposal. If the fixture contains a bulb, do not throw it away; return it to a store or appropriate collection center.

	Screw-in bulbs: E27 and/or E14 Replaceable

3 DESCRIPTION OF THE LIGHT FIXTURES

The “**Sublime Dame Jeanne**” collection is inspired by the famous Dame Jeanne glass demijohn, with shapes that may vary according to the model. Circumferences can exceed 1.5 m, and weight can reach up to 10 kg for the largest models. Each piece receives special treatment, hand-painted with high-transparency, high-durability colors, and internally illuminated to achieve optimal visual effect.

No detail escapes attention

Each **Sublime Dame Jeanne** features a vertical stem equipped with one or more lamps. A subtle balance of light and color gives each piece a distinctive identity, certain to captivate anyone entering your space, day or night.

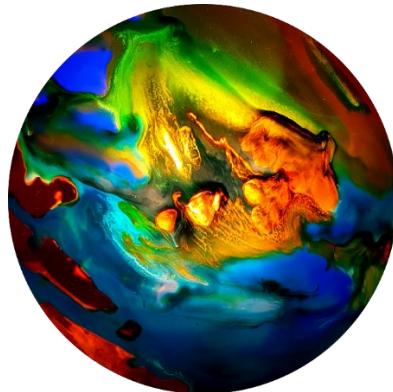

Color intensity

Lumières et Couleurs was born from a passion for colors.

In daylight, by transparency, or when the lamps are on, light diffuses in constantly changing and sometimes surprising color combinations. You can rotate your **Sublime Dame Jeanne** to the viewing angle you prefer, best suited to your interior layout.

Light off and in daylight

Light on at night

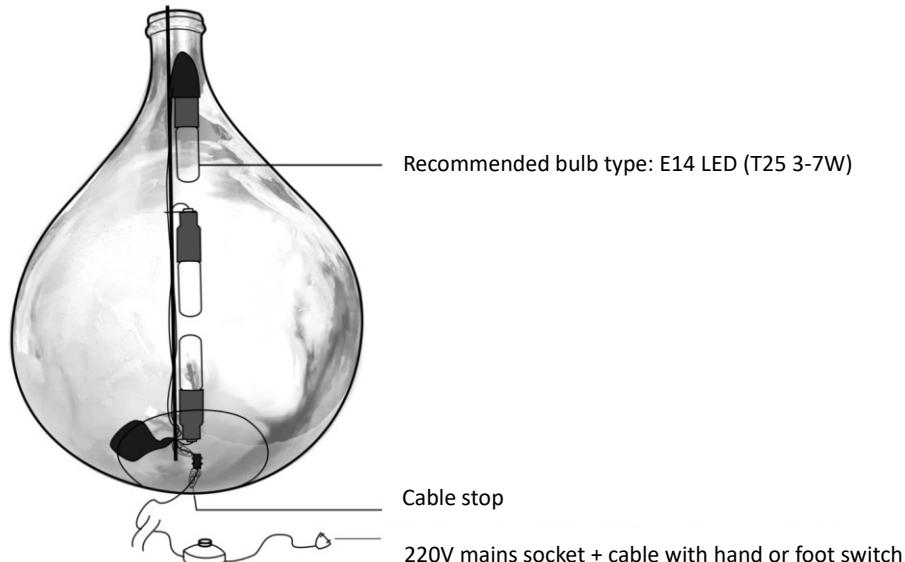

Technical information

The fixtures have a total brightness ranging from 800 to 1500 lumens, depending on light source configuration and the glass globe's darkness. Bulb power can be increased up to 10W (LED) per glass globe (approximately 100W halogen equivalent).

4 MAINTENANCE AND CLEANING

Sublime Dame Jeanne fixtures can be gently cleaned with water and a soft cloth. Always unplug the fixture before performing any disassembly or bulb replacement.

4-1 Fixture layout and identification of replaceable parts

4.2 Bulb replacement and energy efficiency classes

Fixtures are supplied with LED bulbs whose specifications are listed in the appendix. These are low-consumption (<10W) standard LED bulbs, easily available commercially. Specifications may vary as technology evolves (power, color temperature). They are selected to provide optimal light and color rendering for your fixture.

Other bulbs may be used as long as maximum wattage indicated on the sockets is not exceeded. Typically, supplied LED bulbs range between 2W and 7W. For optimal visual comfort, use higher wattage for darker glass colors (4–7W) and lower wattage for lighter colors (3–5W).

Bulb replacement instructions :

- 1- Slide the power cable through the external cable stop at the bottom of the Dame Jeanne to allow the stem to be removed while guiding the cable inside
- 2- Replace the bulb
- 3- Reinsert the stem into the Dame Jeanne, pull any excess cable outside, and reposition the cable stop to secure the stem.

4.3 Power cable replacement

The power cable is Y-type:

"If the power cable or flexible cord is damaged, it must only be replaced by the manufacturer, its service technician, or a qualified person to avoid any risk of accident." The cord must be replaced only with an equivalent model by a professional.

5 WARRANTY

General conditions :

Lumières et Couleurs guarantees the proper functioning of its fixtures for two years under the following conditions (manufacture date as proof):

- 1- Warranty covers all parts and labor, excluding consumables
- 2- Lumières et Couleurs is not responsible for accidents caused by defects or misuse of the fixture.

Warranty is void if:

- 1- Modifications, repairs, or alterations are made outside Lumières et Couleurs workshops or by unauthorized persons.
- 2- Malfunction is caused by improper use or incorrect installation

For questions or after-sales service, contact us using the details provided at the end of this manual.

6 NATURE AND ENVIRONMENT

©Lumières et Couleurs

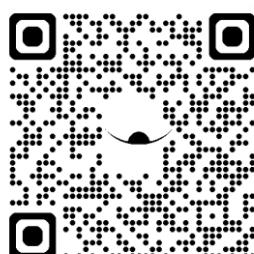

At Lumières et Couleurs, preserving nature and the environment is a key factor in our creative process. From design to final packaging, everything is planned to minimize environmental impact. Material selection, energy needs, and recyclability are continuously optimized to reduce our ecological footprint, component by component.

Our Design Lighting products are more than 80% recyclable or recoverable, reaching up to 97% for the **Sublime Dame Jeanne** models. Material details are provided in the regularly updated recycling guide on our website.
